

Chargeurs Research Engineering & Application on Textiles - CREAT - is the R&D Center of **Chargeurs Interlining**, the Technical Textile Division of Chargeurs.

CREAT develops high added-value Technical Textiles for industrial markets and protective clothes.

A team of PhD with interdisciplinary competencies (Chemists, physicists, Material researchers) are engaged in these objectives.

CREAT develops innovative multifunctional substrates to answer to new market needs with eco-efficient processes.

Within **ACTECO**, **CREAT** is focused on woven and nonwoven materials with pre-functionalised surfaces for post-treatment and for the development of durable self-cleaning and anti-bacterial surfaces of protective clothes.

Up till now, **Chargeurs Interlining** uses Plasma Corona and grafting treatment for various applications.

CREAT wishes to enhance the performances and durability of its products with eco-efficient processes and a reduced energy and water consumption.
